

Nurkanat Baisenkul

Platform, Solutions & Security Engineer

📍 Almaty, Kazakhstan

✉ nurkanat@nurkanatb.kz

🐙 github.com/tuchaVshortah

🌐 linkedin.com/in/nurkanat-baisenkul

Platform- and security-focused engineer with a cybersecurity background and hands-on DevOps experience hardening enterprise infrastructure. Builds secure delivery platforms — CI/CD with integrated SAST, secrets management with HashiCorp Vault and PKI, and highly available data and messaging services — and ships open-source security tooling in Rust, C, and Python. Comfortable across cloud (AWS), infrastructure-as-code, and applied AI.

SKILLS

Cloud & IaC	AWS, Terraform, AWS CloudFormation
Platform / CI-CD	Docker, Kubernetes, GitLab CI, Jenkins, GitHub Actions, on-prem GitLab & runners
Security	HashiCorp Vault, PKI / SSL, SAST, network security, password-policy enforcement
Languages	Python, Rust, C, Bash, SQL
Data & Infra	PostgreSQL (replication), RabbitMQ (clustering), BIND9 DNS, Linux administration
AI	Applied AI / ML with Python

EXPERIENCE

Kaspi.kz

May 2025 – Present

Cyber Threat Defense Architect

Almaty, Kazakhstan

- Manage security infrastructure and enforce enterprise security standards and policies across production services.
- Evaluate service reliability and security posture, identifying and remediating risks in live systems.

Institute of Space Engineering and Technologies LLP

Feb 2025 – Aug 2025

DevOps Engineer (Junior → Middle)

Remote

- Configured advanced PostgreSQL replication and logging; authored a custom C passwordcheck module enforcing organizational password policies.
- Built high-availability RabbitMQ clusters with replication.
- Stood up on-premise GitLab with Docker runners and authored CI/CD pipelines to install dependencies, lint, build, run SAST, and deploy.
- Deployed HashiCorp Vault for secrets management — configured path policies and roles and issued/managed SSL certificates via Vault PKI.
- Administered BIND9 DNS and hardened Linux hosts: user, group, and permission management; secure SSH/FTP remote access; port and cron management.

EPAM Kazakhstan

Jul 2024 – Feb 2025

Cloud & DevOps Trainee

Almaty, Kazakhstan

- Built and operated containerized workloads with Docker and Kubernetes across Jenkins, GitLab, and GitHub CI/CD pipelines.
- Deployed applications to AWS and provisioned infrastructure as code with CloudFormation and Terraform.

Akhmet Yassawi University, Turkestan

Mar 2024 – Aug 2024

IT Specialist

Turkestan, Kazakhstan

- Provided IT support and systems administration — troubleshooting and maintaining hardware, software, and network services to keep operations running.

Development Bank of Kazakhstan

Jun 2021 – Aug 2021

Cybersecurity Engineer (Intern)

Astana, Kazakhstan

- Conducted network security testing in Python and Rust alongside the bank's security team.
- Developed an ARP-spoofing detection tool for the corporate network, forwarding alerts to a Syslog server.
- Strengthened the bank's security posture over a three-month engagement, helping prevent potential breaches.

PROJECTS

passwordcheck (C)

 <https://github.com/tuchaVshortah/passwordcheck>

PostgreSQL passwordcheck implementation that enforces configurable password policies.

arp-spoofing-detector-rs (Rust)

 <https://github.com/tuchaVshortah/arp-spoofing-detector-rs>

Detects ARP-spoofing attacks on local or corporate networks and ships logs to a Syslog-compatible server.

puff (Python)

 <https://github.com/tuchaVshortah/puff>

Passive subdomain enumeration tool for reconnaissance.

EDUCATION

Suleyman Demirel University

Sep 2024 – Jun 2026

Master of Computer Science

Graduated

- Focus: Python, Artificial Intelligence, programming.

Astana IT University

Sep 2021 – Jun 2024

Bachelor of Cybersecurity

- Focus: web development, cybersecurity, network security.
